How to perform a channel configuration flush in System Administration for IntelligentVideo

Procedure Steps

1) In System Administration, open the IntelligentVideo screen from the **Video menu > IntelligentVideo...**

2) Select the **IntelligentVideo Events** tab.

3) Click [Channel Configuration] to open the **Video Channel Configuration** screen.

4) Change any parameter to a different value, then click [OK].

5) Click [Channel Configuration] to open the **Video Channel Configuration** screen again.

6) Change the parameter modified in step 4 back to its original value, then click [OK].

At this time, the channel configuration flush is complete.

Applies To

OnGuard (All versions)
IntelligentVideo (All versions)
