How to rebuild Lenel NVR7 Database

## Procedure Steps

1. Stop the services on the Recorder.
2. Navigate to: C:\ProgramData\Lenel\LNVSuite\7.X\Data\, where you will find all of the DB files.
  - X = Current version of LNVR Suite on the recorder
3. Create a new folder in another location and name it Backup\_DB.
4. Move all of the files from the Data folder into the new backup folder (confirm ~~and make sure~~ the Data folder is empty in step 2).
5. Find an LNVR installer image (either from a Download on the Partner Center Site or the Supplemental CD)
  - Navigate to one of the following locations:
6.
  - Location 1: Supplemental DVD Revision xx\Digital Video\Lenel Video Suite Installation 7.X.XXX\CommonAppData\Lenel\LNVSuite\7.X\Data
  - Location 2: Downloaded file – Lenel Video Suite Installation 7.X.XXX\CommonAppData\Lenel\LNVSuite\7.X\Data
7.
  6. Copy all of the .DB files from the data folder in step 5 into the LNVSuite\7.X\Data folder you emptied in step 4.
  7. Restart the LNVR services.
  8. Let the services rebuild the Database.
- 8.

Note: On average, takes 24-48 hours to complete the database rebuild process. Worst case scenario, 1TB of storage per day, depending upon the number of channels and number of video files, and so on.

## Applies To

Lenel NVR Suite 7.x
