How to integrate a Galaxy Dimension intrusion panel with OnGuard

Procedure Steps

1) Spy key version 5.56 must be applied to the Galaxy Dimension panel, to configure it as a G3 panel. The spy key can be obtained from Honeywell. Note that each spy key is unique, so each time this step is done, a new spy key must be obtained.

2) In the Galaxy Dimension panel configuration, select option 56 for **Communications**.

3) Select option 6 for **RS232**.

4) Change the mode to **Direct**.

5) Select option 2 for **Format**, and select **Microtech**.

6) Enable custom zones and all other options in step 5.

Once the Galaxy Dimension panel is online, all zones, areas and users can be created in OnGuard. Refer to the *Intrusion Detection User Guide* for more information.

Applies To

OnGuard 2009 (6.3.249) or later
Galaxy Dimension intrusion panels
