May Need to Run Database Setup and Form Translator as Administrator When UAC is On

Last Modified on 10/06/2022 4:17 am EDT

Problem Overview

You Need to Run Database Setup and Form Translator as Administrator When UAC is On

Detailed Description

If you have UAC turned on in Windows and you use NT authentication to connect in the **application.config** file for the web applications, and you are logged into the OnGuard server as an administrator account: You may get an invalid login error message when using Database Setup or Form Translator, potentially the UTC Conversion utility. If you encounter this issue, run these applications with "Run as Administrator".

Applies To

OnGuard (All versions)

Additional Information

None
