

How to determine if .NET Framework 3.5 SP1 is installed

Last Modified on 10/06/2022 4:17 am EDT

How to verify if .NET Framework 3.5 SP1 is installed

Procedure Steps

1. Click [Start] in the bottom-left corner of the display.
2. Highlight **Administrative Tools** and select **Server Manager**.
3. In the Server Manager interface, click [Features] to show all the installed features in the right pane. Verify that **.NET Framework 3.5.1** is listed.

If .NET Framework 3.5.1 feature is not listed, you can use either of the following methods to install it:

Method 1: Using Server Manager Interface

1. In the Server Manager interface, select **Add Features** to view a list of possible features.
2. In the Select Features interface, expand **.NET Framework 3.5.1 Features**.
3. You will see two check boxes. Select the box next to **.NET Framework 3.5.1** and click [Next].
Note: If you do not expand .NET Framework 3.5.1 Features and check it, you see the **Add Features Wizard**. Click [Cancel] and repeat the above steps as described.
4. In the **Confirm Installation Selections** interface, review the selections and then click [Install].
5. Allow the installation process to complete and then click [Close].

Method 2: Using PowerShell

1. Click [Start] in the lower-left corner of the display.
2. Highlight **All Programs** and select **Accessories**.
3. Expand **Windows PowerShell** and right-click **Windows PowerShell**, then select **Run as administrator**. Click **Yes** on the **User Account** control box.
4. At the **PowerShell** command prompt, type the following commands, and then press ENTER after each command:
 - - Import-Module ServerManager
 - Add-Windows Feature as-net-framework

Applies To

Windows
