Can't start the Login Driver (or run any OnGuard application) when Oracle Express is the database

Last Modified on 10/06/2022 4:17 am EDT

Symptom

In a OnGuard system using Oracle Express as the database, the Login Driver will not run properly (and therefore OnGuard applications cannot be used).

Resolution

In the Oracle ODBC Driver Configuration, on the Application tab, select the **Enable Closing Cursors** check box.

Once this is configured, the Login Driver and OnGuard applications will function properly.

Applies To

OnGuard (All versions)

Additional Information

None
