

When attempting to issue Mobile Credential or Toolkit inside of Alarm Monitoring "the located assembly's manifest definition does not match the assembly's reference"

Last Modified on 03/11/2024 1:30 pm EDT

Symptom

When attempting to issue Mobile Credential or Toolkit inside of Alarm Monitoring you receive an error like:

Resolution

The solution to fix Alarm Monitoring to allow issuance of Mobile Credentials (or toolkits) would be to open "SystemAdministration.exe.config" using notepad. Copy the entire contents of the file to the clipboard. Then open "acsmntr.exe.config" and replace all the contents of that file with what was copied to the clipboard. Both files can be found in the root of Onguard folder (usually C:\Program Files (x86)\OnGuard).

Applies to

BlueDiamond Credentials

Alarm Monitoring

Additional Information

The alarm monitoring config file is missing the references that the json dll file requires.

As always make a backup of the file to be edited (in this case acsmntr.exe.config) in case the change causes some other issue. Please call into support if you require any assistance.
