Multiple Entries in One Field: Credential Design

Use the following process to add multiple fields in the same text box in Credential Designer in FCWnx.

Procedure Steps

1. Open the desired Credential Design.
2. Select the desired text field. Choose the field you want to add multiple entries.
3. Ensure that text field is set as a **Dynamic Text** field.
4. Right-click within the field and select [Properties].
5. Click the **Text** tab and click [Edit].
6. Create the entry.

Scroll through the available selections and choose the first field.

Enter the following, this will put the first name, a space, and then the last name.:

+ " " +

Note: Everything with in the quotation marks will be static text, the above just puts a space in between the fields you want but anything can be written there. Also make sure to include the space before and after each plus sign.*

The entry should look similar to the following.

[First Name] + " " + [Last Name]

7. Click **Ok** and then **OK** again to return to Credential Designer.
8. Enable Evaluate expressions by selecting [File] and clicking **Layout Properties**.
9. On the **General Tab** click the check box for [Evaluate expressions in data fields].

Applies To

FCWnx
