

SkyPoint license activation does not produce a C2V file or ends with a local com error

Last Modified on 10/06/2022 4:19 am EDT

Symptom

SkyPoint license activation does not produce a C2V file, or ends with a local com error.

Resolution

This symptom might be caused by not having Admin privileges on the base server.

There is a .exe file that must be run using the command prompt. This file is called **haspdinst.exe**, and is located at **C:\Program Files\SkyPoint\SkyPoint Licensing Activation**. You must run this file using the command prompt because it needs an **-i** switch when executed (**haspdinst.exe -i**). Make sure the HASP service is not installed.

1. Open a command prompt on the SkyPoint Base server.
2. Navigate to **C:\Program Files\SkyPoint\SkyPoint Licensing Activation**.
3. Drag the **haspdinst.exe** into the command window.
4. At the end of the statement, add **-i**.
5. Press .
6. Run the Skypoint license admin again and confirm that the C2V file is produced.

Applies To

SkyPoint Base

Additional Information

It might be helpful to turn the User Account Control (UAC) off. UAC can prevent **haspdinstal.exe** from running properly.
