

Windows Vista: Security Utility Must be Run Manually for Public Profile (OG-13003)

Last Modified on 10/06/2022 4:20 am EDT

Problem Overview

Windows Vista: Security Utility Must be Run Manually for Public Profile

Detailed Description

If the Public Network profile of the Windows Firewall is used in Windows Vista, the Security Utility must be run again once the profile is active. The Public profile is not updated during the initial run of the Security Utility.

Applies To

OnGuard (All versions)

Additional Information

None
