How to run the Device Discovery Console in debug mode

Procedure Steps

1) Browse to the following folder on the computer where Device Discovery Console will be run in debug mode:

C:\Program Files\OnGuard\Device Discovery.

2) Open the **DeviceDiscoveryConsole.exe.config** file for editing, using Notepad or another text editor.

3) Locate the following line in the file:

```
add switchValue="Error" name="DeviceDiscovery"
```

4) Change switchValue to "All" so that the line reads:

```
add switchValue="All" name="DeviceDiscovery"
```

5) Save and close the file.

6) Start (or restart) Device Discovery Console, and follow the procedures for which debug output is required. Debug output will be logged to the **DeviceDiscoveryConsole.yyyy-mm-dd.log** file (where yyyy-mm-dd is today's date) in the **C:\Program Files\OnGuard\Device Discovery** folder.

7) When debug output is no longer required, change switchValue back to "Error".

Applies To

OnGuard 2009 (6.3.249) and later
