

# Database Setup or Form Translator yields "Cannot login to database specified" on Windows Vista, Windows 7, or Windows Server 2008

Last Modified on 10/06/2022 4:20 am EDT

## Symptom

Invoking either Database Setup or Form Translator yields an error containing the phrase **Cannot login to database specified**.

## Resolution

The workaround is to right-click Database Setup (or Form Translator) and select **Run as administrator**.

## Applies To

OnGuard 2010 (6.4.500) or later

Windows Vista

Windows 7

Windows Server 2008

Windows Server 2008 R2

## Additional Information

None
