Endpoint error installing Front Desk on client

Symptom

No Endpoint Listening at **http:// locahost**, even though FQDN is defined in the deploy files. This error shows when installing Front Desk on a client workstation.

Also, **serviceModelClient.config.deploy** is defined correctly, but this error is still shown on a client workstation.

Resolution

1. Open Front Desk, and then open the Task Manager.
2. In Windows 7, go to **View**, select **Columns**, and then select **Image Path Name**.
3. Find the process **lnl.OG.VM.FrontDesk.View.exe** and open the file location for that path. This will be
   similar to:
   **C:\Users\[username]\AppData\Local\Apps\2.0\LKY7X014.CDH
   \QN676LT3.7Q6\ongu..tion_25ee14c37812bd95_0006.0004_61d07b08ded848d8** (XP Users might need to browse to this path
   manually).
4. Adjust the **serviceModelClient.config** file in this location, and then try installing Front Desk again. Front Desk should now install correctly.

Applies To

OnGuard (All versions)
