

# How to disable Language Packs in OnGuard

Last Modified on 10/06/2022 4:21 am EDT

Disable Language Packs in OnGuard versions 6.6.415 and higher

## Procedure Steps

Starting in 6.6.415 the OnGuard language packs come with the installation. Language packs are installed depending on the computer Regional/Language. At this time they can only be disabled by doing the following:

This example removes the French Language from OnGuard.

1. In the OnGuard directory, add a New Folder.
2. Name the new folder **Backed up Language Files**.
3. In the OnGuard directory, search for all \*\_FRA.dll files.
4. Select all \*\_FRA.dll files.
5. Cut and paste the files into the **Backed up Language Files** folder
6. Move the **fr-FR** folder (also in the OnGuard directory) to the **Backed up Language Files** folder.
7. Restart the computer. OnGuard should now display English.

## Applies To

OnGuard 2013 (6.6.415) and higher
